

Lucidchart Instructions

1. Begin by clicking *New*, then hovering over *More* so that you can select *Lucidchart*. Note: The first time you attempt to use Lucidchart, it will not be there. You must click “Connect more apps” which will bring you to a window that allows you to connect other apps to your Drive. Search for *Lucidchart for Education* and click “Connect.”

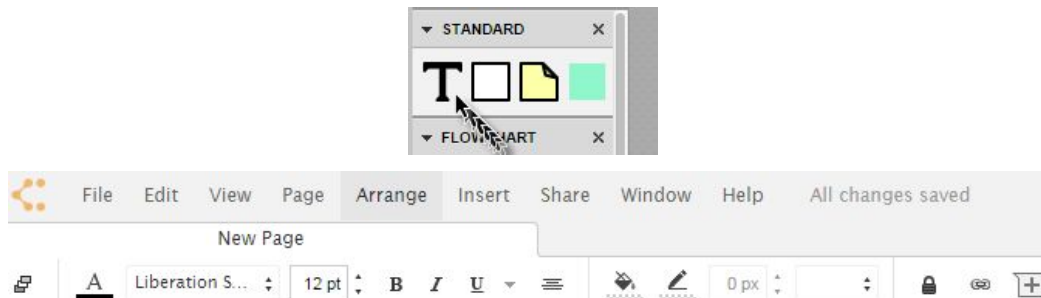

2. In most cases, it's best to start with a blank flowchart. To get started, click the blank flowchart template, or click the *Start Drawing* button.

3. Give your graphic organizer a title by clicking where it says “Blank Flowchart” in the upper left corner.

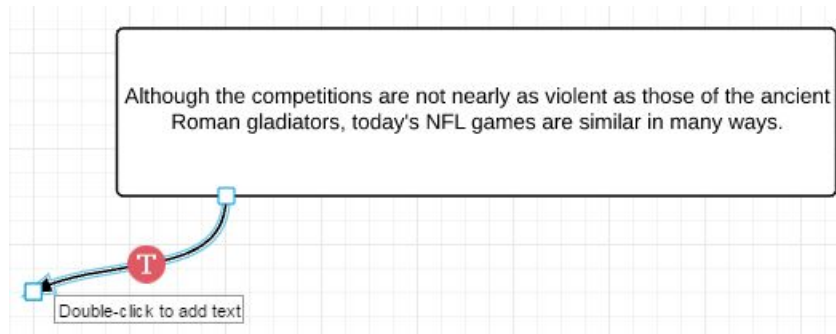

4. After you title your graphic organizer, you may want to start with basic text at the top of your page. To do this, click on the text icon under the standard tools and drag it onto your blank page where you want it to appear, then type your text. You can always format your text using the toolbar at the top of the page.

- Next, you will probably want to create a structural object to represent your main idea or thesis statement. To do this, click and drag the box icon onto your blank page.

- By hovering over the edge of your new text box, you can click and draw a flow arrow to your first supporting idea. You can even add text to the middle of the flow arrow line by double-clicking the line.

- Under the flowchart options, you can start to link ideas by selecting one of the shapes.
- Click the little red dots as you hover over the edges of the text boxes will allow you to make connections between ideas. Clicking and dragging your shapes and text bubbles will allow you to organize your ideas visually. You can even link some bubbles to external web pages.
